

KURV®

ECO-SUSTAINABLE COFFEE TABLE

KURV is a coffee table held together by tension alone; the assembly does not require any glue, screws or fasteners. The components are made of bamboo plywood, a rapidly renewable material and a contributing finish under the 6.0 Section of the U.S. Green Building Council's LEED Materials and Resource Point System. KURV is designed with the minimal number of connections, making it very easy to assemble, disassemble and ship flat.

Options and Features

KURV is designed for maximum material usage and minimal material waste. KURV is fabricated out of a single sheet of 3/4" plywood. Fabrication options: Amber or Natural, edge grain or flat grain, 3-Ply Bamboo Plywood.

Finishes

Plywood parts are finished with Danish oil to seal surfaces and bring out their natural sheen.

Dimensions

Length: 41in / 104cm

Depth: 27in / 68.6cm

Height: 18.5in / 47cm
